

CONTAINERS

DESIGN & FUNCTION

Customized container solutions, which we offer in conjunction with vacuum conveyers or turn-key solutions.

Discharge container with agitator.	Poorly-flowing bulk materials are loosened by an agitator and fed to the suction lance.
Discharge container without agitator.	Bulk solids are collected in a conical container with a central extraction point and fed to the suction lance.
Containers in turn-key solutions.	In the context of complete systems and customized projects, it may be necessary to temporarily store the bulk materials repeatedly. Special requirements may arise due to static charges, aggregation, buildup and adhesions, etc. To avoid this, we can develop solutions to meet your special requirements.
Special solutions.	Development of project-oriented special solutions.

CONTAINERS TECHNICAL DETAILS

Type	Ø [mm]	High* ¹ [mm]
B400	600	670
B600	600	950
